# Highland Glow

Hargrove's Highland Glow gas log set is dual certified for vent-free and vented operation. And Hargrove's combination ceramic fiber and refractory logs provide beautiful fine detail and a realistic glow to the front log and ember bed. Highland Glow comes in a low profile, compact burner design with both manual and remote control models available. The warmth and radiance of the Highland Glow will add natural beauty and comfort to your home.

# Highland Glow

## VENT-FREE FEATURES

**No-Chimney – Vent-Free** systems allow you to have a fireplace in structures that have no chimney, or to keep the flue closed in one that does, for maximum efficiency.

**Cleanliness** – Specially designed burners and log configurations for natural gas or LP gas.

**Convenience** – Turn it on or off at will and regulate flame intensity.

**Safety** – Appropriate controls shut the systems off if oxygen approaches an unsafe level.

**Economy** – Your living space benefits from the heat with the ambience of a fireplace.

## HARGROVE ADVANTAGES

**Safety** – Hargrove’s design is tested to ANSI Z21.11.2 2003 (vent-free) and Z21.60.2003 (vented) standards. An Oxygen Depletion Sensor pilot shuts off gas if oxygen approaches an unsafe level.

**Easy Control** – Piezo spark ignitor for convenient pilot lighting. Regulate flame intensity manually, or with optional wall switch or wireless remote control.

**Appearance** – Hargrove craftsmen create the most realistic, most natural, most durable gas fire logs in the industry. All logs are cast from real trees which were selected for their appearance. And, each log set has been carefully engineered to produce naturally realistic flickering flames and a glowing bed of embers, using either natural gas or liquid propane. All Hargrove gas log sets will bring warmth, comfort and natural beauty to your home.

**Easy Installation** – Burner system is shipped fully assembled and pretested. No electrical hookup is required. Designed for use in an existing wood burning fireplace or in an approved vent-free firebox.

**Lifetime Warranty** – Hargrove gas fire logs carry a limited lifetime warranty against breakage in the original fireplace. All accessories carry a two year limited warranty in the original fireplace.

## Important Sizing Information:

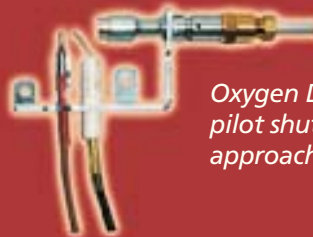

- 22" set will fit spaces designed for 18" to 24" gas log sets.
- 26" set will fit spaces designed for 24" to 30" gas log sets.

Model	Size	Log Qty	Certification Type	Max.BTU	Min. Firebox Dimensions		
					Front (A)	Height (B)	Depth (C)
H Glow	22"	6	ANSI	32,000 NG	28"	16"	12"
H Glow	22"	6	ANSI	32,000 LP	28"	16"	12"
H Glow	26"	6	ANSI	40,000 NG	30"	16"	12"
H Glow	26"	6	ANSI	36,000 LP	30"	16"	12"

See your dealer or visit our Web site for assistance in choosing the best size gas log set for your home.

## RELIABLE PILOT SAFETY SYSTEM

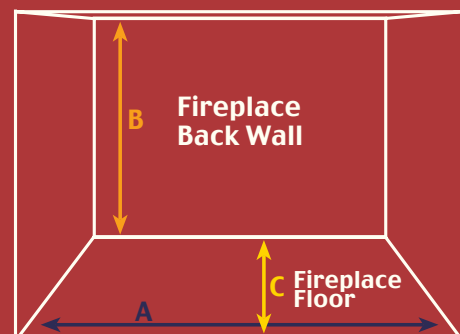

Oxygen Depletion Sensor (ODS) technology originated in Europe and has been in use for more than 35 years with an outstanding safety record. The pilot flame is designed to be stable within a very narrow operating range. The thermocouple responds to change in pilot flame characteristics. When lower levels of oxygen are detected, the pilot flame becomes unstable. The cooling of the thermocouple reduces millivoltage, causing the valve to shut down, and turning off the fuel supply to the appliance.

*Oxygen Depletion Sensor pilot shuts off gas if oxygen approaches an unsafe level.*

## HIGHLAND GLOW VENT-FREE - Gas Log Sizing

Front width (A) and depth (C) are the most important dimensions for gas log sizing. These measurements should be taken from the fireplace floor. In deeper fireplaces, front width measurements can be taken 6" to 8" from the front, allowing better centering in the fireplace.

**A Front Width in inches**    **B Height in inches**    **C Depth in inches**
